

RASPBERRY PI / KEYBOARDS & MICE

Mini Wireless Keyboard – Black w/ Batteries

PRODUCT ID: 1737

DESCRIPTION

Add a good quality, slim keyboard to your Raspberry Pi, Beagle Bone Black or other mini-computer with this sleek black chiclet keyboard. It's a full QWERTY keyboard with a wireless USB dongle and is compatible with all operating systems. We tried many keyboards to find one that felt good for every-day use and didn't take up too much room.

While it's not as small as our Miniature Microcontroller-Friendly Keyboard, this keyboard will work great with a PC, Mac, Raspberry Pi or Beagle Bone. And it's still very small at just 11.2" x 5" x 0.8" (284mm x 127mm x 21mm.)

The keyboard is wireless, and the matching dongle connects through a USB port so it works great with just about anything – it shows up just like any other keyboard. 2 x AAA batteries are required but they're included! The dongle has a storage spot in the battery case, so if you're unable to find it, try opening up the battery spot and see if its tucked in there.

To use with a Raspberry Pi, change the keyboard to USA PC104 layout:

- Switch to root user.
- Run 'dpkg-reconfigure locales' and change from en_GB.UTF-8 to en_US.UTF-8.
- Run 'dpkg-reconfigure keyboard-configuration' and change the keyboard to USA PC104 (again, change as needed).
